GEN 200 control

The first, the best, the Original 'OSA' REGULATOR

What Is Gen200 Control 'OSA'?

Gen200 Control is a premium **plant-strengthening** product based on **true Ortho Silicic Acid (Si(OH)4)**—the only **bioavailable form** of silicon that plants can absorb directly and effectively.

Gen200 was the first in the market to bring **the real, Regulator, stabilized Si(OH)4** setting a new standard for plant resilience, growth, and productivity. Gen200 Control results in bigger yields and better tasting product with longer shelf life.

PRO USER TIPS

Why Si(OH)4?

Feature	Gen200 Control (True OSA)	Cheap OSA Imitations (SiO2-based)
Chemical Form	Si(OH)4 (Ortho Silicic Acid)	SiO2 polymers
Product pH	✔ pH < 1	✘ pH > 3
Bioavailability	✔ 100% absorbable by plants	✘ Poor to no uptake
Effectiveness	✔ Proven plant health, resistance, and yield benefits	✘ Inconsistent or negligible results
Mode of Action	✔ Absorbed systemically, strengthens cell walls, boosts immunity	✘ Sits on the surface with minimal effect

HIGH CONCENTRATION 1,5ML / 10L

Silicon plays a crucial role in plant health, but not all silicon products are the same. Many cheaper products claim to be "OSA" but are actually based on polymeric or dimeric forms like SiO2 (also referred to as polysilicic acids or colloidal silica), which plants cannot readily absorb.

THE GREEN REVOLUTION

GEN 200

GEN200 control

The first, the best, the Original 'OSA'

NPK 0-0-1

Results You Can Expect

- **More resistance against abiotic stress**
  Extreme temperatures & drought.
- **More resistance against biotic stress**
  Pests & Infectious agents.
- **Better uptake & utilization**
  Improved regulation of nutrients.
- **Stronger cell structure**
  Resulting in stronger stems, leaves and roots.
- **Bigger yields & better taste**
  Through boosted chlorophyll development.
- **Suitable for all media & irrigation systems**
- **Can be combined with all fertilizers**

What Makes Gen200 Unique?

- **True Monomeric Si(OH)4**
  – the only form your plants can fully utilize
- **No polymers, no fillers, no empty promises**
- **Backed by science**
  – used worldwide by growers who demand results
- **Enhanced stress tolerance**
  – stronger cell walls, improved nutrient uptake

Don't Be Fooled by Imitators

Many products labeled "OSA" & "REGULATOR" are not true Ortho Silicic Acid.

If it's not monomeric Si(OH)4, it's not Gen200 Control.
